

WFSC 140 Wildlife at the Movies

Film Review (10 points)

Instructions for Films 1, 3, 5, 7, 9

Audience: General public trying to decide if it is worth the time, effort, and money to watch the film (i.e. Films 1, 3, 5, 7, 9)

Webplatform: an account with a GenAI platform (i.e. chatGPT, Perplexity etc)

Instructions:

- Sign into your preferred GenAI platform (i.e. chatGPT, Perplexity etc)
- Start with the following prompt filling in your personal choices at the places with numbers
“Please create a 1 page film review for a public audience of the film (1) made in (2) directed by (3). It should be in the voice of well known film reviewer (4)”
 - (1) - fill in the film title
 - (2) - fill in the film year
 - (3) - fill in the film director
 - (4) - choose a film reviewer name from the list below and fill in
- Read and edit the film critique to align better with the assignment purpose and audience paying close attention to style and voice
- **Highlight** any changes you made to the document. We expect around 4-6 sentences in total. Make it sound more human ;)
- Write 6-8 sentences in a Reflection Section **without using GenAI** on how you think GenAI did with purpose, audience, and style, what decisions you made to edit the document the way you did, and how you might modify your next prompt to improve the GenAI output. Any whiff of GenAI usage here, and you will receive no points in this section per the grading guidelines. Use the first person and make it your voice, not the computers pretty please. We can tell because we read 200 of these and when they all sound similar, it's a giant red flag that makes us smile but loses you points ;)
- Reference your GenAI usage [per course policy](#) using the example format in the course policy, remembering to include the specific prompt you used
- Turn in your completed assignment to the appropriate D2L dropbox
